Time taken 3 mins 33 secs

Grade 4.00 out of 4.00 (100%)

Feedback Thanks!

Question **1**

Correct

1.00 points out of 1.00

Fill in the blank below. If there was one "take home" message in this video it was that...

Reality of using web frameworks

- You **will use frameworks** to make great products!
- Frameworks will **always** ✓ !

Like every few weeks. :)

The correct answer is: change

Question **2**

Correct

1.00 points out of 1.00

In this video we mentioned the most popular, current **big 3** frameworks that are used for **frontend** web development. Mark those 3 frameworks below. We won't use these frameworks in this introductory course, since they are a bit too big/magic, but maybe someday you'll use one on a senior project or something.

Note: out of these 3, Angular is Dave's personal favorite. :)

- ☒ a. Vue.js ✓
- ☒ b. Angular ✓
- ☒ c. React ✓
- ☐ d. Bootstrap
- ☐ e. jQuery

Your answer is correct.

The correct answers are:

Angular,

React,

Vue.js

Question **3**

Correct

1.00 points out of 1.00

In this video we mentioned 3 frameworks that we WILL use in this unit. What frameworks are we using this time?

☒ a. Material Design for Bootstrap

✓ Correct. It's the main one we'll use in this unit.

☐ b. Vue.js

☐ c. Angular

☒ d. jQuery

✓ Correct. To be honest, we'll only use it a little. Mainly it is present since Bootstrap 4 uses it.

☒ e. Firebase hosting

✓ Correct. Later we'll use more Firebase tools, but in this unit we'll only use hosting (at the VERY end).

☐ f. React

Your answer is correct.

The correct answers are:

Material Design for Bootstrap,

jQuery,

Firebase hosting

Question 4

Correct

1.00 points out of 1.00

Match the name of each framework to its purpose.

A product that has a whole suite of tools (one of which is a hosting service) that we'll use VERY HEAVILY in future videos for our data. This company was founded by a Rose alumni. Read this old article for more info if interested: <https://www.rose-hulman.edu/news/2015/young-alumni-duo-finds-success-with-firebase-software-development-product.html>

Firebase

A very famous JavaScript library that is used for DOM manipulations (user interactions), that seems to be on the way out these days (used less each year compared to a year ago). We'll use it since it's a dependency of Bootstrap 4. However, we're trying to avoid using it in the future so you learn more transferable JavaScript skills.

jQuery

It will help us make our pages LOOK better. It's designed to help make responsive (works on smartphones or desktop computers) web sites.

Bootstrap (Material Design for Bootstrap)

Your answer is correct.

The correct answer is:

A product that has a whole suite of tools (one of which is a hosting service) that we'll use VERY HEAVILY in future videos for our data. This company was founded by a Rose alumni. Read this old article for more info if interested: <https://www.rose-hulman.edu/news/2015/young-alumni-duo-finds-success-with-firebase-software-development-product.html> → Firebase,

A very famous JavaScript library that is used for DOM manipulations (user interactions), that seems to be on the way out these days (used less each year compared to a year ago). We'll use it since it's a dependency of Bootstrap 4. However, we're trying to avoid using it in the future so you learn more transferable JavaScript skills. → jQuery,

It will help us make our pages LOOK better. It's designed to help make responsive (works on smartphones or desktop computers) web sites. → Bootstrap (Material Design for Bootstrap)
